Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Dev. Dyn. 199:292-314(1994).

CC -1- FUNCTION: INTEGRIN ALPHA-1 IS A COLLAGEN RECEPTOR, BEING RESPONSIBLE FOR ADHESTON OF PLATELETS AND OTHER CELLS TO COLLAGENS, MODULATION OF COLLAGEN AND COLLAGENSE GENE EXPRESSION, FORE GENERATION AND ORGANIZATION OF NEWLY SYNTHESIZED EXTRACELLULAR MATRIX. IT IS ALSO A RECEPTOR FOR LAMININS, COLLAGEN C-PROPERTIDES AND E-CADHERIN. INCE HOWOXYGOUG FOR A NULL MUTATION IN THE ALPHA-2 DIE VERY REALY IN EMBRYOCENSIS.

C-PROPERTIES AND E-CADHERIN. IN EMBRYOCENSIS.

C-SUBUNIT: HETERODIMER OF AN ALPHA AND A BETA SUBUNIT. ALPHA-2 ASSOCIATES WITH BETA-1.

C-1- SUBUNIT: THE INTEGRIN I-DOMAIN (INSERT) IS A VWFA DOMAIN. INTEGRINS WITH I-DOMAINS DO NOT UNDERGO PROTEASE CLEAVAGE.

C-1- SUBLIARITY: CONLAINS 10 WFA GOMAIN.

C-1- SIMILARITY: CONLAINS 10 WFA GOMAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This SWISS-PROT entry is copyright. COLLAGEN, COLLAGEN C. PROPERTIOSS, FIRSONECTIN AND E-CADERAIN. IT RECCONIZES THE PROLINE-HYDROXYLATED SEQUENCE G-F-P-G-B-R IN COLLAGENS. IT IS RESPONSIBLE FOR ADHESTON OF PLATELETS AND OTHER CELLS TO COLLAGENS. IT IS RESPONSIBLE FOR ADHESTON OF PLATELETS AND OTHER CELLS TO COLLAGENS. IT IS RESPONSIBLE FOR ADHESTON OF PLATELETS AND OTHER SEXPRACESLULAR MATRIX.

SUPPLISATION AND ORGANIZATION OF NEMLY SYNTHESIZED SEXPRACESLULAR MATRIX. The mambrane protein.

SUBUNIT: Heterodimer of an alpha and a beta subunit. Alpha-2 associates with beta-1. Interacts with HPS5.

SUBURIT: HETEROTIVE TYPE I MEMBRANG PROFESAS CLEAVAGE.

SUBURITY: BOORTION 534 is associated with platelet-specific alloanting here. FollyMorphism position 534 is associated with platelet-specific alloanting here. FollyMorphism position 534 is associated with platelet-specific alloanting here. HPA-56 (BR). HPA-57 (

SUBCELLULAR LOCATION: Type I membrane protein.
TISSUE SPECIFICITY: Widely expressed with highest expression in muscle and heart. Found in articular cartilage.
DOWAIN: THE INTEGRIN I-DOMAIN (INSERT) IS A VWFA DOMAIN. INTEGRINS WITH I-DOMAINS DO NOT UNDERGO PROTEASE CLEAVAGE.
SIMILARITY: Belongs to the integrin alpha chain family.
SIMILARITY: Contains 1 VWFA domain.
SIMILARITY: Contains 7 FG-GAP repeats.

-1- SUBUNIT: HETERODIMER OF AN ALPHA AND A BETA SUBUNIT. ALPHA-1
ASSOCIATES WITH BETA-1.

-1- SUBCELLULAR LOCATION: Type I membrane protein.

-1- DOMAIN: THE INTEGRIN I-DOMAIN (INSER!) IS A WWFA DOMAIN. INTEGRINS WITH I-DOMAINS DO NOT UNDERGO PROTEASE CLEAVAGE.

-1- SIMILARITY: Belongs to the integrin alpha chain family.

-1- SIMILARITY: Contains 7 FG-GAP repeats.

Screening assay for modulators of integrin binding - using immobilised or labelled alpha-d polypeptide, useful for, e.g. treating type-I diabetes.

Example 5; Fig 1A-D; 106pp; English.

This sequence represents a human beta-integrin CDILb subunit which is used to describe a method for identifying compounds that modulate the interaction of the beta-integrin alpha-d subunit with a binding partner of alpha-d which involves contacting an alpha-d polypeptide with an alpha-d binding partner, one of which is immobilised and the other of which is labelled, in the presence of a test compound, and determining if the compound affects binding between the alpha-d polypeptide and alpha-d binding partner, where the alpha-d polypeptide is alpha-d or its fragment comprising the cytoplasmic, transmembrane or extracellular domain of alpha-d. Compounds that modulate alpha-d binding could be used to treat

Integrins are a class of membrane-associated molecules that participate in cellular adhesion. Integrins are made up of an alpha subunit and a beta subunit. One class of human integrins are restricted to expression in white blood cells and have a common beta? subunit: the leukocyte integrins, Leu-CAMS, leukointegrins or beta? integrins. Beta2 integrins have an important role in immune and inflammatory responses. The present protein sequence is the human integrin alpha subunit CD11b. This sequence was used in an alignment to identify a novel beta2 integrin alpha subunit: alpha (AAA60014 and AAB07159). The present sequence has subunit: alpha (AAA60014 and AAB07159). The present sequence has subunit: alpha dientity to the protein sequence of alpha d. The Alpha dene and protein may be useful in therapy for diseases linked to aberrant alpha dienction e.g. Type I diabetes, atherosclerosis, multiple cielerosis, asthma, psoriasis, lung inflammation, acute respiratory distress syndrome, rheumatoid arthritis and leukocyte adhesion deficiency (LAD). In addition, anti-alpha_d monoclonal antibodies may be used in the

```

```
This invention relates to a modified integrin-I or integrin I-like domain polypeptide comprising at least one disulfide bond so that the domain is stabilised in a desired conformation. The polypeptide of the invention may have antiinflammatory or immunosuppressive activities. The polypeptides of the invention have an open conformation and are useful as immunogens to produce antibodies that selectively bind to integrin I-domain; and for identifying a modulator of integrin activity, or of interaction of an integrin and a cognate ligand. The polypeptide of the invention, or antibodies (preferably anti-LFA-I antibody) is useful for treating or preventing an integrin mediated disorder which is an inflammatory or autoimmune disorder in a subject and for inhibiting the binding of an integrin to a cognate ligand such as Crohn's disease,

nephritis; human immunodeficiency virus (HIV), myocardial infarction, Sporgen's syndrome, rheumatoid arthritis, dermatitis. A therapeutic composition comprising the peptide of the invention is useful for treating an integrin mediated disorder in a subject. The polypeptides and/or active or antigenic fragments are useful as reagents for diagnosis of integrin-mediated disorders. The present sequence represents the human integrin-1 alpha-M protein subunit used to generate the mutant polypeptides of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Use of an anti-alpha-d monoclonal antibodies for promoting locomotor recovery, inhibiting locomotor damage, limiting locomotor impairment, or limiting autonomic and sensory dysfunction following spinal cord injury.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to promoting locomotor recovery, inhibiting locomotor damage, limiting locomotor impairment, or limiting autonomic and sensory dysfunction following spinal cord injury by administering an anti-alpha d (Beta2 integrin alpha2 subunit) monoclonal antibody to a spinal cord injury victim. The method also involves the use of a ligand selected from ICAM-R or VCBM-1 (intracellular cell adhesion molecule, vascular cell adhesion molecule). The method is useful for promoting locomotor recovery, inhibiting locomotor damage, limiting locomotor impairment, or limiting autonomic and sensory dysfunction following

spinal cord injury. In particular, the spinal cord injury comprises compression of the spinal cord. The antibodies are also useful for reducing inflammation at the site of a central nervous system injury. The specification also details the identification of Beta2 integrin alphab crows and proteins, for use in raising the antibodies. Beta2 integrins are implicated in diseases such as IAD [leukocyte adhesion deficiency, inflammatory response, diabletes, multiple sclerosis, arthritis, graft atherosclerosis, inflammatory bowel disease, Crohn's disease, ulcerative complex, immune complex alvolitis and leukaemia. The present sequence is Beta2 integrin alphab protein sequences 88888888888888

The invention comprises structurally biased variant integrin inserted (1) domain proteins, wherein the alterations to the protein occur in at least two noncontinuous regions. Specifically the the variant integrin I domain proteins are structurally biased to exist in the open conformation, thereby altering the binding ability of the protein. The invention also comprises nucleic acids encoding the variant integrin I domain proteins.

The integrin I domain proteins and nucleic acids are useful for treating, preventing or suppressing integrin related inflammatory and immunological disorders (e.g. rheumatorid arthritis). The variant integrin I domain proteins and nucleic acids can also be used for treating: ischaemial infection; and cancer. The variant integrin I domain infection; and cancer. The variant integrin I domain nucleic acids and proteins may be used in gene therapy, as vaccines and to screen for bloactive agents. The present amino acid sequence represents the Mac-1 alpha subunit of integrin
                                                                                                                                                                                                                                                             9

thinge region polypeptide comprises: a wild-type human IgG1 immunoglobulin hinge region polypeptide; a mutated human IgG1 immunoglobulin hinge region polypeptide; derived from (a) having 3 or more cysteline residues; where the first cysteline residues; where the first cysteline is not mutated; a mutated human IgG1 immunoglobulin hinge region polypeptide contains to more than one cysteline residues, where the mutated human IgG1 immunoglobulin hinge region polypeptide, derived from mutated human IgG1 immunoglobulin hinge region polypeptide contains no cysteline residue; and a wutated human IgG1 immunoglobulin hinge region polypeptide contains no cysteline residue; he binding domain immunoglobulin hinge region polypeptide contains no cysteline residues. The binding domain immunoglobulin hinge region polypeptide contains no cysteline residues to mimmunoglobulin hinge region polypeptide contains no cysteline residues. The binding domain immunoglobulin fusion protein is capable of at least one immunoglobulin hinge region polypeptide contains no contains no contains no cysteline residues the polymucleoticity (ApCC) and complement fixation. The binding domain immunoglobulin fusion protein, a recombinant expression construct, comprising the polymucleotide (operably linked to a promoter), a host rocluded are an isolated polymucleotide with a recombinant expression construct, producing the binding domain-immunoglobulin fusion protein, a construct, producing the binding domain-immunoglobulin fusion protein or suspected of having a malignant condition or a B-cell disorder, thaving or suspected of having a malignant condition or a B-cell disorder, e.g. melanoma, carcinoma or sarcoma, rheumatoid arthritis, mutation and sease. The present sequence is a binding domain immunoglobulin fusion protein sequence data for this patent formed part of the printed specification by their SeQ or autoimmune sequence. The presence data for this patent formed specification by their SeQ or unwher therefore none of the sequences can be explicitl

It also attaches to cellular substrates as part of this function making it useful in visualising endothelial tissue. Mac-1 is a member of the Integrin Gene superfamily. (Updated on 25-MRR-2003 to correct PR field.) (Updated on 29-MRR-2003 to correct PA field.)

probes based on tryptic peptide fragments of p150.95. The sequence can be attached to appropriate control elements and expressed in prokaryotic and eukaryotic cells. The protein can be used to treat or prevent rhinoviral infection because it intracts with ICAM-1 and inhibits cell-virus attachment. It can also be used as an anti-inflammatory agent. See also AAQ06063-4, AAQ06068, AAR07121-8 and AAR07152-6. (Updated on 25-MAR-2003 to correct PR field.)

Compounds that modulate alpha-d binding could be used to treat diseases such as type-I diabetes, atherosclerosis, multiple sclerosis, asthma, psoriasis, lung inflammation, acute respiratory distress syndrome and rheumatoid arthritis
